DOWNTOWN REVITALIZATION

Preliminary design is complete for the downtown revitalization streetscape project, which will renovate HWY 711 (Third Street) from Cyna’s Jewelers to Vance Street in the heart of downtown.

INFRASTRUCTURE REPORT

A stormwater hydrological report for the Town and the University was completed in January. The full report – which includes long-term recommendations to improve stormwater – is available online. Construction to repair stormwater infrastructure along First Street, Bonnie Road and near Maynor Manor is ongoing and will be completed soon. These projects are being funded through an $893,291 Hurricane Matthew Disaster Recovery Grant.

The Town secured a $150,000 grant from the Department of Environmental Quality to complete an evaluation of the Town’s Waste Water infrastructure. This project evaluated infrastructure improvement needs at the Waste Water Treatment Plant and in the Town’s sewer system. The evaluation was completed in July of 2018 and identified over 6 million dollars in infrastructure needs.

The Town will soon deploy new digital, remote-read meters for all water customers. The meter change out program is scheduled to begin summer of 2019. This project will increase meter reading efficiency and accuracy and enhance overall customer service capabilities for the Town.

DEPARTMENT CONTACT DETAILS ON BACK PAGE

Please visit the Town’s website – www.pembrokenc.com – to sign up for Code Red emergency alert notification system. The Town will use the Code Red system in the future to send general notices and communicate with the public during states of emergency.
